

P/2167-230

SYSTEM AND METHOD FOR CHECK

EXCEPTION ITEM NOTIFICATION

ABSTRACT OF THE DISCLOSURE

- 5           A system mainframe receives a payee check file and a payor check file and produces an exception file including at least one exception item. A server receives the exception file and generates a Web file including information relating to the exception item and generates an address for the Web file. The server further sends an exception client an e-mail which notifies the exception client of the exception
- 10   item and provides the exception client with the address for the Web file.
